## CORPORATE PROFILE

Dextera Surgical designs and manufactures proprietary stapling devices that enable the advancement of minimally invasive surgical procedures. In the U.S., surgical staplers are routinely used in more than one million minimally invasive laparoscopic, video-assisted or robotic-assisted surgical procedures annually.

The company's signature proprietary technology, the MicroCutter 5/80, is the world's first and only five-millimeter surgical stapler that articulates to 80 degrees in each direction. As the smallest-profile articulating stapler available today, the MicroCutter 5/80 may reduce the amount of dissection and tissue handling required to position the stapler in confined spaces, enabling access to difficult-to-reach anatomy. The cartridge-based device's small size and wide articulation range is designed to enhance the surgeon's access and visualization at the surgical site, and to mitigate limitations on the advancement of minimally invasive surgical approaches created by larger stapling devices.

Dextera Surgical also markets the only automated anastomosis devices for coronary artery bypass graft (CABG) surgery on the market today: the C-Port® Distal Anastomosis Systems and PAS-Port® Proximal Anastomosis System. These products, sold by Dextera under the Cardica brand name, have demonstrated long-term reliable clinical performance for more than a decade.
